

STUDENT SURVEY RESULTS - WORDLOAD

The survey paper uses a scale of 5 corresponding rating levels [1: 0-20%]; [2: 21-40%]; [3: 41-60%]; [4: 61-80%]; [5: 81-100%]. The results will be summarized into two levels of evaluation: Dissatisfaction rate (D rate) (level 1 + level 2), Satisfaction rate (S rate) (level 4 + level 5). The survey results of the subject are obtained by taking the average of all students, the statistical results by year will also take the average again by subject.

The survey results show that students are satisfied with the reasonable arrangement between general and specialized subjects except in 2019 because it was the period of COVID-19 when most of study activities were performed online and the infrastructure for online educations were not prepared for this situation. This highest rate of satisfaction is in 2022 with above 91% (Figure 1). The satisfaction rates about the reasonable distribution ratio of theory and practice are increasing during the period 2020-2022 (from 87% to 92%) except in 2019 because of COVID-19 (Figure 2). The students also satisfy with the appropriate arrangement of module order with high satisfaction rate from 78 to 92% through semesters (Figure 3). Overall, the survey results suggest that the students satisfy about workload the Bachelor of Science in Oceanology program.
